

HOW TO USE 'THE CLIP'

Proud 2009 recipient of the prestigious spoga horse Innovation Award for Best Product in the Safety for Equestrian & Horse category.

Feed the lead rope through and around The Clip and place above the Adjustment Position.

This setting allows you to easily alter the length of your rope.

Once you have determined your lead length, drop the rope into the Adjustment Position. By turning the screw in this setting, you can adjust the amount of tension on your lead rope.

Use the Locked Position when hanging hay nets or water buckets. This setting is **NOT RECOMMENDED** for tying horses.

The Ultimate Horse Tying System!

NOTE: We recommend you use a pliable 1/2 inch (1.3 cms) to 5/8 inch (1.6 cms) synthetic rope (such as a poly weave rope). Cotton ropes are woven too loosely and may snag or catch when pulled thru the Adjustment Position. [View our demonstration video online](#)
